AGENTVERSE 2026

Robotics Track

If it feels like science fiction, you're heading the right way.

SUPPORTED BY

NVIDIA.

ROBOTICS · THE CHALLENGE

Give an agent a body

Agents today live mostly in browsers and chat windows. Build an embodied agent that perceives a simulated world through its sensors, reasons about what it finds, and acts on it, making its own decisions with nothing to phone home to.

Perceive

Take input from at least one simulated sensor.

Decide

Choose actions from what it senses, not a pre-scripted path.

Act

Move, navigate, manipulate objects or communicate.

WHERE TO AIM

- Assistive perception
- Learning on the fly
- Adaptive autonomy
- Coordinated fleets
- Your own idea

ROBOTICS • TECHNICAL TOOLS

Your simulation stack

Simulator

NVIDIA Isaac Sim is recommended. It needs an RTX-class GPU with NVENC. MuJoCo, PyBullet, Gazebo or Webots run without one.

Sensors

RGB or depth camera, LiDAR, microphone, IMU or contact sensors.

Streaming

Run headless with the streaming launcher and connect with the Isaac Sim WebRTC Streaming Client.

Do this first

Get the stream running in the first hour, before you write any agent code.

Keep it on the device

Core decisions that depend on a remote service score lowest on autonomy. Run models locally where you can.

ROBOTICS · DELIVERABLES

Three things to submit

Technical summary

One page, PDF. Your user and problem, key features, system architecture, where each model runs with hardware and latency, limits, the critical failure mode and safety.

Simulation video

Up to 1 minute, captured from the stream. Show perception on screen next to the actions, and one unscripted change in a single continuous take.

Pitch

5 minutes, live to the judges. What problem the robot solves, how it works, what it can and cannot do, and why it matters to its user.

ROBOTICS · JUDGING

How you'll be judged

25% 25% 15% 20% 15%

WHAT A TOP SCORE LOOKS LIKE

Perception-driven action	Every decision traces to what it perceived, and it corrects mid-run.
Adaptation to change	The scene changes mid-sequence and the agent visibly re-plans.
Operational autonomy	Runs within a stated edge-device budget and behaves sensibly when unsure.
Relevance and impact	A well-evidenced need, with the most critical failure mode handled on screen.
Ambition and technical quality	An original approach to a demanding problem, executed to a high standard.

AGENTVERSE 2026

Biotech Track

Agents for discovery: accelerating the path from lab to patient.

IN COLLABORATION WITH

BIOTECH · THE CHALLENGE

Make the path to patients faster

Bringing a new treatment to patients takes over a decade and billions of pounds, and most candidates fail along the way. Pick a stage of the journey, find a real bottleneck, and build an agent that makes it faster, cheaper or fairer.

WHERE TO AIM

- Research agents
- Multi-agent pipelines
- Design-build-test-learn agents
- Trial agents
- Clinical support agents
- Your own idea

Build for the people affected

Your users can be researchers, clinicians or patients. Keep a human in the loop for decisions that matter, and show your reasoning so a scientist could check it.

BIOTECH · TECHNICAL TOOLS

You don’t need a lab

Literature	PubMed, Europe PMC, bioRxiv, medRxiv, OpenAlex
Drugs and molecules	ChEMBL, PubChem, Open Targets, TDC, MoleculeNet
Proteins and structures	UniProt, RCSB PDB, AlphaFold DB
Genomics and cells	ClinVar, gnomAD, GEO, GTEx, DepMap, CELLxGENE
Clinical trials	ClinicalTrials.gov API, ISRCTN registry
Patient data	MIMIC-IV demo, PhysioNet, Synthea
Dataset hubs	Kaggle, Hugging Face, Zenodo, Figshare, OpenML

Synthetic data is allowed

- Label it and say how you made it.
- Never present it as real-world performance.
- No real patient data, ever.
- Reference every dataset and check its licence.

BIOTECH · DELIVERABLES

Four things to submit

Working demo

A demo or prototype that runs, even if it is rough.

Code

In a public repo, with a short README.

One-page write-up

The problem, who it helps, your data, how you evaluated it, and the agent's limits and safeguards.

Pitch

Up to 4 minutes, plus 2 minutes for the judges to test your model.

BIOTECH · JUDGING

How you'll be judged

WHAT A TOP SCORE LOOKS LIKE

Uniqueness of idea	A fresh approach that goes beyond a literature chatbot or stock model.
Real-world need	One specific bottleneck for a named user, with a plausible next step to real use.
Science, data and evaluation	Tested against a baseline, with data referenced and licence-checked.
Agent design and live demo	A real multi-step agent whose live demo handles a judge's new input.
Security and responsible design	Named risks with a mitigation for each, and a human signs off key decisions.

AGENTVERSE 2026

Finance Track

Agents you would let near your own money.

SUPPORTED BY

Jane Street

IN COLLABORATION WITH

UCL TRADING SOCIETY

FINANCE · THE CHALLENGE

Help people make better money decisions

Money runs on decisions made by busy people with half the picture. A compliance analyst facing 400 alerts, a trader testing a hunch, a small business owner wondering if payroll will clear. Pick one of them, find a decision they get wrong or make too slowly, and build an agent that helps, without hiding the reasoning or the risk.

WHERE TO AIM

- Risk and compliance
- Market agents
- Financial inclusion
- Scam and fraud
- Regulation
- Your own idea

Would you let it near your own money?

Keep a human in the loop for anything that moves money or affects a person, and show your reasoning so a professional could check it.

FINANCE • TECHNICAL TOOLS

You don’t need a Bloomberg terminal

Agentverse finance kit	Synthetic cases, real price history, hidden test mode
Crypto prices	Binance Vision, Binance public market-data API
Macro and rates	FRED, Bank of England, ECB Data Portal, ONS
Company filings	SEC EDGAR, Companies House API
Fraud and laundering	IBM AMLSim, PaySim, Elliptic, ULB card fraud
Prediction markets	Polymarket public API
Households	World Bank Findex, FCA Financial Lives, ONS
Rules and regulation	FCA Handbook, legislation.gov.uk, BIS

Synthetic data is allowed

- Label it and say how you made it.
- Never present synthetic results or backtests as real-world performance.
- No real financial records, account details or logins.
- Paper trading only. Never connect to real money.
- Reference every dataset and check its licence.

FINANCE · DELIVERABLES

What to submit

Code

In a public repo with a short README. Ideally include a demo that runs, even a rough one.

Pitch deck

The problem, who it helps, your data, how you evaluated it against a benchmark, the agent's limits and risk controls, and your key statistics.

Live pitch

Top three teams only. Up to 4 minutes to the judges, plus 2 minutes for questions.

Judges score every team from the deck, so put your evidence there.

FINANCE · JUDGING

How you'll be judged

25% 25% 15% 20% 15%

WHAT A TOP SCORE LOOKS LIKE

Traceable reasoning	Any decision traces from raw data to output, with maths kept apart.
Testing on unseen data	Unseen data, real costs, a fitting benchmark and stated uncertainty.
Risk controls and oversight	Limits enforced in code, every action logged, one control shown live.
Relevance and impact	A specific user, with the failure that would hurt them handled on screen.
Ambition and technical quality	Does something a conventional program couldn't, built to a high standard.

No leaderboard. An honest result that misses its benchmark can still score top marks.

AGENTVERSE 2026

Creative Track

Build a brand with an agent as your creative partner.

IN PARTNERSHIP WITH

Google DeepMind Canva

CREATIVE • THE CHALLENGE

Build a brand for a cause that needs one

Pick a cause that has never had a designer: a charity, a campus initiative or a local business. Then build its brand from the ground up, working through every decision in dialogue with a Gemini agent.

Brand strategy

Audience, positioning, voice and story, developed with the agent.

Visual identity

Logo, palette, typography, imagery and a launch campaign.

Brands for causes

Built for real limits, so volunteers can use it.

The best entries show where the agent changed your thinking, and where you overruled it.

CREATIVE • TECHNICAL TOOLS

Your toolkit

Gemini app	Strategy, naming, voice, critique and feedback	REQUIRED
Canva	Brand book, logo, campaign assets and mockups	REQUIRED
Nano Banana	Moodboards, imagery, textures and campaign visuals	RECOMMENDED
Gems in Gemini	A custom brand partner that starts every chat in context	OPTIONAL
Canva Brand Kit	Logo, colours and fonts kept consistent	OPTIONAL
Canva Magic Studio	AI editing, resizing and copy tools	OPTIONAL
Google Fonts	Free typefaces for the identity	OPTIONAL
Other software	Free to use, take the output into other mediums	OPTIONAL

CREATIVE • DELIVERABLES

Four things to hand in

Brand book

Canva Presentation, 1920 x 1080. 12 required pages, up to 15.

Launch campaign

An Instagram post, an Instagram story and one asset of your choice.

Agent log

Your Gemini share link, plus one page in the brand book.

Pitch

3 minutes live from the brand book, plus 2 minutes of questions.

Set every Canva link to “Anyone with the link can view” and name each design with your team name.

CREATIVE · JUDGING

How you'll be judged

WHAT A TOP SCORE LOOKS LIKE

Brand strategy	A sharp audience insight shapes every later choice.
Visual identity	Distinctive and ownable, and holds up small and in one colour.
Launch campaign	An idea that makes the audience act, adapted to each format.
Agent as creative partner	The dialogue visibly changed the work, with a clear turning point.
Fit for the cause	Volunteers could pick the brand up and use it tomorrow.

SHOWCASE · 12:00 - 12:30
